Replacement Blade CB-08 for Fujikura CT-50

The spare blade for the CT-50 — 16 positions, 3 heights, 60,000 single-fiber cleaves.

The consumable behind every Fujikura CT-50: a circular blade made to the CB-08 pattern the cleaver's automatic blade management turns and counts on. Sixteen positions, three heights, 1,250 fibers per position-height — when the last edge is spent, this disc goes in, in the field, exactly as the cleaver was designed for.

CB-08 — the CT-50 blade pattern

Key Features

- Made to the CB-08 pattern for the Fujikura CT-50 — drop-in fit for the motorised rotation system
- 16 cutting positions x 3 height settings, 1,250 fibers per position-height
- 60,000 single-fiber cleaves per blade; 5,000 12-fiber ribbon cleaves
- User-replaceable in the field — no service center, no adjustment visit
- Private labeling made to your requirements — your labels, part numbers and barcodes on the inner boxes and outer cartons

Specifications

Different hole patterns — order the blade for your cleaver

In Use

Rotate the disc to a fresh position when cleave angles climb; when a full turn is spent, step the blade up to its next height. When the third height is used up, fit this replacement: the host cleaver is designed for the user to change the blade in the field, with no service-center visit. Keep a spare in every cleaver case. Compatibility: aftermarket replacement blade, not an original Fujikura part. Fujikura and the cleaver names are trademarks of Fujikura Ltd., used only to identify compatibility.

Private Label & OEM

The K-CB550R is supplied in neutral, unbranded stock as standard. Private labeling is made to your requirements — labels with your logo, part numbers and barcodes on the inner boxes and outer cartons, so the goods arrive ready for your warehouse. Custom barcode & contract labeling is applied to every inner box and outer carton to your receiving specification.
