Fiber Splice Protection Sleeves 60mm KM-60

Heat shrink splice protection sleeves with a stainless steel strength pin — bags of 100.

Every fusion splice leaves one weak point: a short length of bare glass. The KM-60 closes it. Threaded on before splicing and shrunk in the splicer heater, its three-part build — polyolefin outer tube, hot-melt adhesive inner tube and a full-length stainless steel pin — turns the joint into a clear, rigid, sealed splint.

KM-60 — 60mm sleeves, three views

Key Features

- 60mm single-fiber splice protection sleeves — the standard closing step of every fusion splice
- Three-part build: cross-linked polyolefin outer tube, hot-melt adhesive inner tube, stainless steel pin
- Fast, even shrinking in a standard splicer heater cycle
- Flame retardant, electrically insulating, clear finish for splice inspection
- Bags of 100 pcs; private labeling made to your requirements — your labels, part numbers and barcodes on the inner boxes and outer cartons

Specifications

Sleeve length	60 mm
Strength member	Stainless steel pin, 1.0 mm dia.
Recovered outer diameter	Approx. 2.6 mm
Fiber type	Single fiber, 250 / 900 µm
Shrink temperature	Standard splicer heater (about 90–110 °C)
Operating temperature	−55 °C to +105 °C
Packing	100 pcs per bag

Features at a glance

In Use

Thread the sleeve onto one fiber before splicing. After the arc, slide it over the joint, center it in the splicer heater and run the standard heating cycle. The outer tube shrinks tight, the inner adhesive melts and seals around the bare fiber, and the steel pin sets the joint straight and rigid — ready for the tray.

Private Label & OEM

The KM-60 is supplied in neutral, unbranded stock as standard. Private labeling is made to your requirements — labels with your logo, part numbers and barcodes on the inner boxes and outer cartons, so the goods arrive ready for your warehouse. Custom barcode & contract labeling is applied to every inner box and outer carton to your receiving specification.
